Kristina Berger

World Champion
woman compound 2013

"≡LEVEN makes everything last longer - my strength, because I don't have to waist it for arrow pulling, - the lifetime of my arrows, because they get stopped smoothly and the target itself last longer than all the others I've ever used!"

As arrow and bow technology is rapidly developing it is now necessary to have a new generation of targets on the archery market.

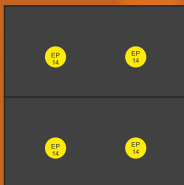

NEW Eleven has always been a pioneer when it comes to inventions on the target market. The **≡COWAVE≡** name reflects the reduced ecological footprint we leave since 80% of the weight is recycled material. The **≡CO** also reflects that this product is economically correct for the customer, since it is cheaper than any other solution with highest quality level. A cheaper product with higher quality is a good combination making **≡COWAVE≡** unbeatable.

\$ We have put all available knowledge and required material in this product to achieve:

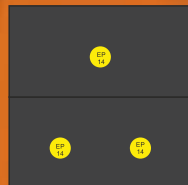

- arrow stop at any weather condition, at any poundage, any arrow
- unbeatable durability with **≡ASY PULL** inserts
- arrow saving technology (longer arrow life)
- easy pulling for the archer with **≡ASY PULL** inserts
- modular solution to make target handling easier
- any target type or variation can be built and adopted to your needs

+ To achieve all the required features above a high density shred of recycled material is used. High density means heavier targets. **≡COWAVE≡** is heavier than our previous targets of the same size. This is one of the reasons why we use the modular system. The other one is the high grade of flexibility it gives our customers to have the target customized to their needs at different events or different stages of one event.

Ivana Buden

Target Championships 2nd place 2013
 Pro Archery Series 1st place 2013
 Field Championships 1st place 2012

„I have very high expectations of the target I'm using for both my every day training and competition. A good target will safety stop every arrow, indoor or outdoor. It will be soft enough to reduce any possible damage to the arrow. It will reduce shoulder injuries caused by hard targets which make it hard to pull the arrows out. And an amazing target will do ALL of the above. And This is why I use ELEVEN targets and would recommend them to all the archers, professional or recreational.”
